

CoSyst Applications Funded – 2006/2007 Round

- Dr Vincent Savolainen (Royal Botanic Gardens Kew)
Genomic tools for studying the origin of species
- Dr Thomas Richards (University of Exeter, School of Biosciences)
Molecular diversity of microbial eukaryotes using a large-scale parallel tag sequencing strategy
- Dr Paula Rudall (Royal Botanic Gardens, Kew)
Hydatellaceae: a key to reassessing morphological evolution in angiosperms
- Dr Catherine Kidner (University of Edinburgh/Royal Botanic Gardens Edinburgh)
Comparative epigenomics of non-model organisms
- Dr Mark van der Giezen (Queen Mary, University of London)
Breviata and the 7th eukaryotic supergroup
- Dr Donald Quicke (Division of Biology, Imperial College London)
Barcoding of hostplant genes from larval guts: a proof-of-concept study
- Dr Julie Hawkins (The University of Reading)
The tortoise and the ant: dispersal biology and speciation in biodiversity hotspots
