Synopses of the British Fauna

The Linnean Society's *Synopses of the British Fauna* publications are a series of concise, systematic works on selected groups of animals designed for use as field guides.

Published with the Estuarine and Coastal Sciences Association, these illustrated field and laboratory, pocket-size books are designed to meet both the needs of amateur and professional naturalists. Each volume presents a more detailed account of a group of animals than can be found in most field guides and bridges the gap between the popular guide and more specialist monographs and treatises.

The groups covered (many in more than one volume) include: Molluscs, Isopods, Harvestmen, Bryozoa, Sipunculans, Phoronids, Foraminiferids, Brachiopods, Nemertean, Siphonophores and Velellids, Crustaceans, Polychaetes, Mites, Nematodes, Echinoderms, Thecate Hydroids, Woodlice, Ostracods, Parasitic Copepods, Chaetognatha, Pseudoscorpions, Millipedes and Barnacles.

For a detailed list of titles and prices please look on the Linnean Society website (www.linnean.org). For postal orders please contact the Field Studies Council at the following address:

FSC Publications, Preston Montford, Shrewsbury, SY4 1HW
